SUMMARY

My current research is in scientific computing and numerical analysis, the mathematical design and analysis of computer simulations. My focus is on the development of new finite element methods for wave propagation simulation. The application is on gravitational waves in the framework of Einstein's theory of General Relativity.

Programming Skills: C, Fortran, Python, Matlab, CUDA, OpenMP, MPI.

EDUCATION

PhD. Applied Mathematics. Adviser: Prof. Douglas N. Arnold, University of Minnesota. 2015

Best Poster Design and Presentation, SIAM CSE 2015

University of Minnesota Doctoral Dissertation Fellowship (1 year)

NSERC Alexander Graham Bell Canada Graduate Scholarship for Doctoral Studies (3 years)

FQRNT Doctoral Research Scholarship (3 years; declined)

MCS. Master of Computer Science. University of Minnesota. 2014

MSc. Applied Mathematics. Adviser: Prof. Bernardo Cockburn, University of Minnesota. 2011

FQRNT Master's Research Scholarship (2 years)

BSc. First Class Honours in Mathematics and Physics. McGill University, Canada. 2008

Mathematical Contest in Modeling by COMAP: Meritorious Winner (twice; coached by Prof. Nilima Nigam)

DAAD-RISE Internship in Germany (declined)

Association of Universities and Colleges of Canada: Gaz Métro Scholarship (twice)

ACADEMIC EXPERIENCE

Chu Assistant Professor. *Applied Physics and Applied Mathematics, Columbia University.* 2015-

Doctoral Thesis. Adviser: Prof. Douglas N. Arnold, University of Minnesota. 2011-2015

- Create and analyze novel finite element methods for gravitational wave propagation.
- Implement in parallel on a cluster of the Minnesota Supercomputing Institute in Python and FEniCS.

Poster at Doctoral Research Showcase, University of Minnesota, 2015

Poster at MSI Research Exhibition, 2015

Poster at SIAM CSE 2015, awarded Best Design and Presentation

Poster at IMA Special Workshop: Structure-Preserving Discretizations of PDEs, 2014.

Invited Talk at Columbia University APAM, 2015

Invited Talk at Student Days, SIAM Annual Meeting, 2013

Master Thesis. Adviser: Prof. Bernardo Cockburn, University of Minnesota. 2009-2011

- Investigate the superconvergence of a new discontinuous finite element method for acoustic waves.

Peer-reviewed article with Cockburn in Mathematics of Computation, 2014

Invited Talk: US National Congress on Computational Mechanics, 2011

Invited Talk: International Congress on Industrial and Applied Mathematics, 2011

- Research Assistant for Starkey Hearing Technology.** *Adviser: Prof. Fadil Santosa, University of Minnesota.* 2009
- Predict the elastodynamic response of an idealized ear canal using Fortran-based seismic modeling.
- NSERC Research Assistant.** *Adviser: Prof. Jay Louise Nadeau, McGill University.* 2008
- Model an oscillatory networks of genes in bacteria.
 - Implement simulation using Mathematica.
- ISM Research Assistant.** *Adviser: Prof. Henri Darmon, McGill University.* 2007
- Design a geometric algorithm for recognizing rational numbers using shortest vectors in approximation lattices.
- Two peer-reviewed articles in McGill Undergraduate Mathematics Magazine, 2008
Talk at Canadian Undergrad Mathematics Conferences, Simon Fraser University, 2007
- Research Assistant.** *Adviser: Prof. Peter Grütter, McGill University.* 2006
- Design a fibre walker for an atomic force microscope.
- Research Assistant.** *Advisers: Prof. Srikar Vengallatore & Prof. Peter Grütter, McGill University.* 2005
- Model molecular heat and strain distribution using finite elements.
- Research Assistant.** *Adviser: Prof. William Skene, Université de Montréal, Canada.* 2004
- Synthesis and characterization of pH-dependent reversible luminous polymers.

INDUSTRIAL EXPERIENCE

- Chief Data Scientist at Vizanda.** 2016-2017
- Develop web-based software to automatically understand generic user input data and rapidly offer relevant visualizations and intelligent insights.
- Intern at Schlumberger-Doll Research Center.** *Adviser: Dr.ir. Aria Abubakar.* 2011
- Develop forward elastic scattering code in 3D based on different Frequency Domain Finite Difference methods.
 - Integrate the Fortran code in Schlumberger's commercial software.
- Fields-MITACS Industrial Problem-Solving Workshop** 2008
- Model and detect highly synchronized event in brain recordings.
Problem by the Hospital for Sick Children, Canada.
- IMA Math Modeling in Industry Workshop** 2007
- Classify Earth-orbiting objects from worldwide data of astronomical telescopes using clustering techniques.
Problem by The Aerospace Corporation
- Mathematical Problems in Industry at University of Delaware** 2007
- Predict filter saturation from a simple filtration process through porous media.
Problem by W.L. Gore Associates
- Graduate Student Mathematical Modeling Camp at Rensselaer Polytechnic Institute** 2007
- Optimize an underground geothermal heating system through water flow modeling.
Adviser: Prof. Burt S. Tilley, Olin College
- Peer-reviewed article with Ortan, Tilley, and Townsend, International Journal of Heat and Mass Transfer, 2009
Peer-reviewed article with Ortan in McGill Undergraduate Mathematics Magazine, 2008

ACADEMIC ACTIVITIES

Teaching

- Partial Differential Equations, 2015-2016
- Modeling Contest in Math Mentoring, 2010-2015 (2 Meritorious Winners and 5 Honorable Mentions)
- Sequences, Series, and Foundations, 2013
- Multivariable Calculus and CSE Calculus 2, 2011-2012
- CSE Linear Algebra and Differential Equations, 2009-2010
- Excursions in Mathematics, Precalculus II, College Algebra and Probability, 2008-2009

Leadership

- Founding the SIAM Student Chapter at the University of Minnesota: 2010-2015
- Founding the McGill Undergraduate Mathematics Magazine: 2 issues, 50 pages, 400 copies each, in 2006-2008.
